## Chat Application RESTful API using ASP.net

### Project Checkpoints

**Project title:**

RESTful API for simple chat application using ASP.net.

**Checkpoint 1:**    **October 04, 2017**

Set-up ASP.net. Create a Chat box application with ASP.net Web API. Probably use a WPF application to present the peer-to-peer chat.

**Checkpoint 2:**    **October 23, 2017**

Incorporate RESTful web api and SignalR in the web application. Create a minimal website representing the features.

**Checkpoint 3:**    **November 08, 2017**

Create the front end part of the web application. Feature a login system to log in as an user to the website. Add some Styling to the website.

**Checkpoint 4:**    **November 27, 2017**

Finalize the website front-end. Tweak the styling and other front-end parts. Have the full featured log-in system working. Use database to store the username and passwords. The full website should be ready by this checkpoint.
